Acknowledgments

We take this opportunity to express our gratitude to the people who have been instrumental in the successful completion of this research. First, we would like to express our gratitude to our supervisor Yvette Henriquez for the useful comments, remarks and engagement through the learning process of this research work. Furthermore, we like to thank the participants in our research, who have willingly shared their precious time during the process of collecting the data. Also, we would like to thank our families, who have supported us throughout entire process, by encouraging us to give the best of us and keeping us harmonious and helping us putting the pieces together. We will be forever grateful for their love and support. And finally we like to thank God because he gave us the health and the strength we needed in the moments we were weak.

Abstract

The purpose of this research is to report on the importance of the use of EFL/ESL websites in the development of the listening skill in the students of the Advanced English Level at the University of El Salvador. Taking into account that generally students agree that listening is the most difficult skill to develop since it is the one that they hardly ever practice outside of the classroom, this study investigated such importance of the use of ESL/EFL websites as a mean to develop the listening skill.

It evaluated a group of forty students, which were enrolled in the Advanced English I level at the Foreign Language Department in the University Of El Salvador, during the semester II, 2012. The students were introduced to five websites and instructed to use them, to practice their listening skill outside of the classroom periodically. The data collected revealed that despite some difficulties encountered, students had an overall positive attitude towards using the selected websites in the development of their listening skill. Besides, students found that practicing English to develop their listening skill through ESL/EFL websites was interesting and effective in the development of their listening skill.
1. Introduction

English has become a worldwide language and there is no doubt about its importance in the present time in our society. In the Foreign Language Department students who are learning English as a Foreign Language face many difficulties in order to be proficient in the new language. The English Language revolution is intrinsically tied with the advances of the technological resources and professional development of students. As a consequence, the Internet has become recently one of the interactive tools which have seen a spectacular growth ever since it started. Therefore, technology is affecting every aspect of education in teaching and learning as well.

Learning English as a foreign language is a hard task for everyone and having an education in a foreign language is even harder. In general when people learn a language, there are four skills that they need for a complete communication: listening, speaking, reading and writing. In the same way, when humans learn their native language, they usually learn to listen first, then to speak, then to read, and finally to write. In order for students to be able to read, to understand effectively, to speak English fluently and to write with no mistakes students need the development of the language skills.

Based on this, the research is focused in the use of EFL/ESL websites and how these might change the development of the listening skill. Taking into account that listening is one of the skills that humans learn first, it is important to look for different resources to help students to develop it.
a. Statement of the Problem

Students who are learning English as a Foreign Language generally agree that the listening is the most difficult skill to develop, especially in students who are learning English as a foreign language. For this reason, looking for new ways to improve the listening skill has become important, not only for EFL teachers but also for EFL students. As a result, the importance of the listening skill is growing, and some web designers have emphasized on creating ESL/EFL websites in order to develop language skills, and particularly the listening skill. In spite of this, most of the Advanced English I students do not make use of the different websites specifically to practice their listening skill.
b. Main research question:

What is the importance of the use of the ESL/EFL websites by Advanced English I students from the Foreign Language Department in the development of their listening skill?

Subsidiary research questions

1. What are the reasons to use or not to use ESL/EFL websites for Advanced English students to develop their listening skill?

2. What is the relationship between the use of ESL/EFL websites by Advanced English students and the development of their listening skill?
c. Significance of the problem

There is no doubt that computers and the Internet technology have changed the way we live, and the importance of technology in schools and universities cannot be ignored anymore. In fact, the use of computers is growing in the field of English Teaching and learning. Therefore, websites have become an important tool not only for teachers to provide information, but also for the students to practice it, to achieve a better understanding. Students who are learning English as a foreign language generally agree that Listening is the most difficult skill to develop, so they need a variety of language experiences to integrate the new knowledge. In spite of this, in the Foreign Language Department at the University of El Salvador there is not a research that discusses how students can have a rich experience with the foreign language when using the ESL/EFL websites, especially to practice the listening skill, given that they live outside the new language.

For that reason, this study can help Advanced English students in the Foreign Language Department at the University of El Salvador to be aware of the importance of the use of ESL/EFL websites to develop their language skills, specifically the listening skill. By presenting the different findings, students can consider ESL/EFL websites and see their proper use for the practice of listening. In addition, this study will be useful not only to students who have access to Internet, but also to students who like to use technological resources in two ways. First, for those students who have access to Internet but do not make use of ESL/EFL
websites to practice their listening skill, so they can discover there is another way
to practice English beyond written grammar exercises; second, for students who
like to use Internet, so they can be aware of which are the top\textsuperscript{1} ESL/EFL websites
that are focused specifically on the development of their listening skill at the same
time they can surf through the Internet.

Finally, this study will provide useful information for English teachers to know
how the ESL/EFL websites can be used to practice English language skills,
particularly how these websites can affect in the development of the students’
listening skill in the Advanced English levels.

Websites are classified into English as Foreign Language (EFL) coupled with
English as a Second Language (ESL), for that reason both terms will be used
indistinctly during the research.

\textsuperscript{1} The Top ESL/EFL websites have been determined according to Dr. Ron Chang Lee. (Refer to p 11.
Section 3.3 (Websites description)
d. Purpose

This study had as main objective:

**General objective:**

- To determine the importance of the use of ESL/EFL websites by Advanced English I students from the Foreign Language Department to develop their listening skill.

**Specific objectives:**

- To identify Advanced English I students’ reasons to use or not to use EFL/ ESL websites in the development of their listening skill.

- To discover the relationship between the development of the listening skill and the use of ESL/EFL websites by Advanced English I students.
e. Limitations.

Although this research was carefully prepared, there were some unavoidable limitations. First of all, in the Foreign Language Department there is not a specific place with computers and tools where students can practice their listening skill. Due to the lack of classrooms, even the language lab is used to take classes. Second, at the moment of developing the research, there were only two computers, which were not enough for the students to use in the practice. For that reason, the researchers had to provide the necessary equipment like computers, headsets, etc. Third, there were time constraints that those students had in the practice during the semester of the research at the Foreign Language Department at the University of El Salvador, so the time they had was limited, because they had to run from one class to the other. Finally, it is important to mention that in spite of all this, the research was completed.
f. Definition of key terms

The definitions of the terms used in this research are presented below:

**Advanced English students:** The Foreign Language department defines an Advanced English student as the student who manages the level B2 according to the guidelines of the Common European Framework of Reference for Languages (CEFR).

**Chatting:** To participate in a synchronous exchange of comments with one or more people over a computer network, To converse in an easy, familiar manner; talk lightly and casually.

**EFL student:** term for the students who are studying the English language in a non-native speaker’s in country.

**ESL student:** term for the students who are studying English language in a native speaker’s country

**ESL/EFL websites:** are the websites which contain English as a Second Language and English as Foreign Language information, exercises and different tools for teachers and students.

**IELTS:** International English Language Testing System Organization created to assess the language ability of people who study or work in English-speaking countries.
**Listening:** is the ability to accurately receive messages in the communication process.

**Websites description**

These are the top five ESL/EFL websites to practice the listening skill that were chosen. They were a selection made by Dr. Ron Chang Lee who has a Ph.D. in Educational Technology in 1998 from the University of Illinois. He is one of the pioneers in the U.S. in utilizing online resources to assist English language teaching. At the present time Dr. Ron Chang Lee teaches ESL and works in Pasadena City College, at Los Angeles, USA and the websites are described as

The Top Five ESL websites that the research considered for practicing listening:

1. **www.listen-and-write.com.** It is a free listening practice to improve listening skills and hear about the news. Design by Contented Designs and dryicons.com

2. **www.eslfast.com/robot/**. By listening conversations students can improve their listening skill.

3. **www.esl-lab.com/**. This ESL listening Web site created by Randall Davis helps ESL/EFL students improve their listening comprehension skills through practice with self-grading
4. **www.elllo.org/**. For learning real English language from English speakers around the world on **elllo** with free listening activities and downloads.

5. **www.eslfast.com**. This is a ESL listening web site in which students can listen to a story and then they can do different activities for example: dictation.
2. Review of related literature

Literature review

This study is divided in two main parts: the first one is related to the use of websites and the second one addresses the listening skill.

a. The use of Websites

Recently, technology is considered a very important tool in our society and in the global world as well. Websites are extraordinarily useful for a variety of activities including: chatting, social networks, email, bookings, shopping, publicity, reading, looking for a job, business and so on, consequently, using websites has become part of the students’ daily lives. Nowadays, websites allow students to practice interactively in the target language. In first place, Thomas N. Robb, an English professor at Kyoto Sangyo University in Japan, declared that “the World Wide Web has become an established tool for language learning and teaching” (2009) furthermore, he also mentioned that “one of the main reasons is that ESL/EFL web sites are focused on the development of the language skills of the students who are learning English as a Foreign Language”. In this way, ESL/EFL websites can be used as an instrument to practice the listening skill. According to John Zhao professor at Michigan State University (2001) “technology tools can be used as an effective teaching tool for English language learners”, and this is also supported by Uschi Felix in his book Language Learning Online (1999) who stated that “it is very important to make use of the computer technology tool to facilitate
language instruction for the students, not only because it is more enjoyable, but also because it is more successful which highlights the importance of reinforcing the listening skill in order to become proficient in the new language.

For that purpose, teachers have been motivated to use different tools, for instance, Ajaan Randall, who has a master’s degree in TESL; he created the cyber listening lab (1997), which is a website to help both ESL and EFL students to improve their listening comprehension skill through practice with self-grading quiz pages and different types of exercises. Moreover, his website has three ways to measure the listening capacity: from easy, to medium, to difficult; this page also has listening quizzes for academic purposes, and vocabulary lessons. Ajaan Randall created this website with the main purpose to help foreign language students to develop both oral and listening skills, and following his example, some other teachers have developed new techniques in order to increase the opportunities to practice the listening skill online.

b. The Importance of the Listening skill

The listening skill is essential in any interpersonal relationship and for all interpersonal communication. Listening is certainly the most important skill in language learning acquisition sustained Saricoban, a PhD in English Language Teaching Program in Hacettepe University, Institute of Social Sciences, Ankara, TURKEY (1999) “Listening is the primary skill to develop in order to speak a foreign language, and one of the fundamental language skills, because it is a medium through which humans gain a large portion of their information and their
understanding of the world during their lives, since babyhood.” As a matter of fact, listening is the ability to accurately receive messages in the communication process; In addition it is the key to all effective communication, because without the ability to listen effectively, messages can be easily misunderstood by the audience, which may cause a lot of intercommunication issues.

For instance, Norris (1993) expressed that “listening is the communication skill used most often in the assimilation of information process, and the most neglected in foreign language teaching.” As a general rule, good listening skills have benefits in our social and personal lives.

For these reasons previously mentioned, the research regarding the importance of the listening skill began to be voiced since the middle of ‘60s by Rivers(1966) in his Journal *The Modern Language*, (p.196-204), who had enough evidence to say that, "speaking does not itself constitute communication unless what is being said is listened and comprehended by another person.” Indeed, the listening skill involves two processes to be successful, which are: passive listening and active listening. Subsequently, a report carried out by Abrahams in 1986 established that “there are two main levels of listening involvement for speakers: the passive level and the active level. In the passive level, no reaction is required on the part of the listener and in the active level it is mandatory to have more involvement than in the first one, because the listener has to react to what it is said.” For example, when someone is only listening to music for pleasure, no reaction it is required; while this
is approached in a different way when the listener has to react to what it is said, depending on the purpose of the message.

In conclusion, it could be said that human beings listen a lot more than they ever read, write or speak in everyday life. Consequently, students tend to become worried if they fail to understand a word or phrase and this usually causes them to get discouraged. In short, it is mainly important to focus in the development of the listening skill which also promotes a positive attitude in the foreign language learners.
c. Top 5 ESL/EFL websites descriptions

www.listen-and-write.com

Listen and write dictation is a page in which students can practice English as a foreign language or second language. First, the students can practice some listening activities; in which, their listening skill is measured by using dictation, then, students have to listen to a recording; while they are listening, they have to write the sentence or paragraph in a chart, if they don’t write the full information the recording indicates that they have to do it over or the times that it is necessary until it is correct.
There are also different kinds of exercises; one of them is the category of typing, where the students have to type the complete word: students listen to a short paragraph and write the whole information.
The third exercise is typing only the first letter of a word: students have to listen at paragraph and they have to write just the first letter of each word. The third exercise is about listening and filling out the blank spaces, using popular songs.
www.eslfast.com/robot/

In this website students can practice and speak English at the same time, it is a web page in which students can practice listening with an online robot, they can also find some easy conversations depending on the level; in this section English learners can find many topics related to the real life activities such as: college study life, at the library, dating, food, shopping, buying etc. So students can select the one they are interested the most.

They have to choose a topic from the list of subtopics appears and they have to select the most suitable for them, on the next you have to listen a dialogue and follow a script; also students can find sequences of scripts related with the same topic.
At the end of the dialogue you students can discuss the topic with the robot Mike, they only have to click on the picture, then a chart appears in which students have to type their questions and Mike answers it, and he also makes questions as well.
Randall’s EFL cyber listening lab is a website that helps ESL/EFL students to improve their listening and writing skills. Students listen to a story and at the same time they have to answer some questions about the topic. There are various exercises such as: mixed up sentences exercises in which they have to form a sentence related to the topic. In the sentences and vocabulary, they can look for examples that show them how they have to apply the new vocabulary. In Randall’s lab, the listening skill is measured from easy, to medium, to difficult.

In addition, it allows the students to practice in a fun way while they are listening to a story, and they have to choose the right item similar to a test. It is divided into:

I. Pre-Listening Exercises
II. Listening Exercises

III. Vocabulary and Grammar Activities

IV. Post-Listening Exercises

V. Online Investigations
English Listening Lesson on Line is a page in which students can learn about intercultural situations such as typical food of every country for their independence day, dancing in Chile, personality, tattoos, living abroad, national holydays, wildlife and more. This listening activity is about sharing experiences from many people around the world and discussing specific topics.
First, students have to select the topic they are interested from the list then they have to listen to it and read the listening script, in the audio slideshow they can listen to the conversation step by step in order to understand the conversation, and then students can learn more about the new vocabulary by reading some examples that show the application.

Commonly by showing sentences with the new word or words, the students can enrich their vocabulary and they can be in contact with different kind of accents or pronunciations as well, which will allowed them to identify the right words.
www.eslfast.com

This it is a website in which students can listen to a story about: real life, love, work etc. At the end of the story students can find a list of options, such as yes and no questions, to practice what they have listened.
Here, students can also have different practice by answering some questions and they have to use the correct grammar form to answer, in order to obtain a point similar to a game which makes them competitive.
1. New to America

Nancy was new to America. She came to America speaking only her native language. She brought her 8-year-old son with her. He was all she had in the world.

They found an apartment in Arcadia. They were there for only two months when a neighbor’s dog jumped over the fence. The dog ran toward Nancy’s son. Nancy put her body in between the dog and her son. The dog stopped when it saw Nancy screaming at it. She was going to punch it in the nose. The dog turned around.

Shaking, Nancy took her son upstairs. They stayed in the apartment all weekend. Then Nancy found another apartment, close to the school that her son was going to attend.
3. Design of the Study

a. Research Variables

Since the main objective of this study was to determine “The importance of the use of the EFL/ESL websites by Advanced English I students from the Foreign Language Department at the University of El Salvador in the development of their listening skill during the term II- 2012” the system of variables which includes the dependent variable and the independent variable was the following:
b. Description of the research design

This research involved a qualitative analysis of data gathered from Advanced English I students of the English teaching major at the University of El Salvador by using two tests as the instruments to collect the data. The qualitative method was selected according to Denzin and Lincoln (1994) because it is focused on the interpretation of phenomena in a natural setting to make sense in terms of the meanings people bring to this setting. Since the qualitative method involves collecting information about experiences, introspection, life stories, interviews, observations, history and interactions, it was considered the one to best help in the accomplishment in this research.

c. Sources of data

The study was carried out at the Foreign Language Laboratory in the Central Library third floor, University of El Salvador. (See appendix c).

d. Sampling procedures

The participants in this study were selected through convenience sampling from the groups of students from the Foreign Language Department at the University of El Salvador, who were enrolled in the Advanced Intensive English I subject, semester II in 2012, specifically students who attended classes in the afternoon, which was a total population of 140. In this research a total of 40 students participated voluntarily in order to develop the study and at the same time they practiced their listening skill.
Each participant was exposed to practice in the top five ESL/EFL websites, using one website each time, they had to go once a week so they could get enough practice in all of them.

e. Method and instruments of data gathering

Method

This research presented as a main method a focus group and observation. This method allowed researchers to bring together a number of subjects to discuss and analyze the topic of interest. The group size was kept as a convenience small group (40 students) so that its members did not feel intimidated but could express their opinions freely during the process of gathering the data.

The Advanced English I students at the Foreign Language Department were asked to attend the listening practice during eight weeks. First, the students chose one hour from the schedule: Tuesday and Thursday between 1:00 p.m. and 5:00 p.m. Then, the students attended to a specific session and they did an entry listening test in order to collect data about students’ listening level. Subsequent to that, the researcher provided the students with a list of activities they had to do during the one hour session, in which students were supervised and they had to use one of the top five ESL/EFL websites to do the practice. After that, at the end of the research students did the exit test to appraise the development of their listening skill. Finally, researchers interviewed Advanced students to know their opinion about not only websites in general but also the top five websites, which was the mainly focus of this research.
Instruments

The instruments used to carry out the research questions and collect participants’ information were two listening tests and an interview.

Listening tests.

There were two listening tests administered before and after the study to check the students’ development of their listening skill. Both listening tests contained listening questions from the website www.examenglish.com which offers free listening practice for learners of English. It is managed by Steve Chadwick, who is a highly experienced ESL examiner and software developer. In addition to all the questions from the test, there were those written by experienced teachers and examiners.

The first exam was an entry listening test to determine the students’ current listening level at that time, according to The Common European Framework of Reference for Languages (A2 level to C2 level) before getting started with the research. This exam had a limited time of 25 minutes to be completed. (See appendix d).

In the second test that was administered at the end of the research, called the Exit test, the Advanced English I students had to have a listening practice test based on The International English Language Testing System (IELTS). This full-length computer-based IELTS test is constituted by 40 questions with 4 listening passages. The students had 30 minutes to complete the test. (See appendix e).
At the end of the test, the software calculated the band score. Both exams use the Common European Framework of Reference for Languages (CEFR) proficiency levels. (See appendix f).

**Interview**

The interview used in this study had the purpose of identifying the perception of Advanced English I students towards the use of ESL/EFL websites at the time of practicing English. Out of the different types of interview, the interview used was a structured instrument. This type of interview is the best suited for engaging participants where it would be beneficial to compare or contrast their responses in order to answer the research question. The structured interview was divided into three sections. Section One: Overview which included time, date, place and interviewees' personal information. Section two: general questions about using ESL/EFL websites for practicing English. And finally section three: specific questions about using ESL/EFL to develop their listening skill (See appendix a).
f. Statistical treatment

The analysis of the data was conducted by collecting not only the results obtained in the listening tests but also by comparing these with the data answers from the interviews. Analyzing qualitative data involved reading through the interview, developing codes, and drawing connections between discrete pieces of data.

The steps to analyze the data obtained from the interview were:

1. Reviewing data
2. Organizing data for analysis
3. Developing codes
4. Coding data
5. Summarizing data

On the other hand, the listening tests were analyzed by showing the frequency and comparing the results from both tests in order to check the students' development of their listening skill.
4 Analysis of the data

a. Test Results

**Entry listening test.**

As it was explained in the previous chapter, an entry listening test was taken in order to obtain information about the level of the Advanced English students listening skill according to the guidelines from the Common European Framework of Reference for Languages (CEFR).

Table 1 explains the level obtained during the entry initial test by a total group of 40 Advanced English I students from the Foreign Language Department.

<table>
<thead>
<tr>
<th>Level</th>
<th>N° students</th>
</tr>
</thead>
<tbody>
<tr>
<td>A2</td>
<td>15</td>
</tr>
<tr>
<td>B1</td>
<td>20</td>
</tr>
<tr>
<td>B2</td>
<td>5</td>
</tr>
<tr>
<td>Total</td>
<td>40</td>
</tr>
</tbody>
</table>
The results illustrated that, from a total group of 40 students, the 50% of them were in the B1 level which is good because according to the Foreign Language Department at the University of El Salvador an Advanced English I students should be in the B1 level according to the CEFR.

In contrast, the results from the initial test also showed that there is 37% of the Advanced English I students that have difficulties in their listening skill, because they only reached the level A2. Finally, the entry listening test demonstrated that 13% of the Advanced English I students outperformed the level required to be consider an Advanced English I student.
**Exit listening test**

The exit test was an IESLT computer based listening test in which students had to answer a total of 40 listening questions. Even when the score was calculated between 1 and 9, there was a comparison table which gave an approximate comparison between the entry listening test and the exit test. (See annex 9.2)

Table 2 explains the level obtained during the second test by a total group of 40 Advanced English I students from the Foreign Language Department at the end of the research.

<table>
<thead>
<tr>
<th>Level</th>
<th>Nº students</th>
</tr>
</thead>
<tbody>
<tr>
<td>A2</td>
<td>3</td>
</tr>
<tr>
<td>B1</td>
<td>32</td>
</tr>
<tr>
<td>B2</td>
<td>5</td>
</tr>
<tr>
<td>total</td>
<td>40</td>
</tr>
</tbody>
</table>

The results explained that in this exit listening test, 7% of the Advanced English I students obtained 3 or 3.5 score which according to the comparison table it has an equivalent to level A2 according to CEFR. On the other hand, 80% of the students got a level B1, and 13% of the Advanced English students obtained the B2 level.
**Comparison results**

Table 3 compares both initial and exit test by a total group of 40 Advanced English I students from the Foreign Language Department at the end of the research.

**Table 3**

<table>

</table>

Most of the students pointed out that grammar is the mainly purpose why they use the Internet when they study English and it is important to highlight that only 2 students use the Internet to practice their listening skill.
Question 3: What is the type of exercises you usually do online?

<table>
<thead>
<tr>
<th>CODING KEY</th>
<th>N° STUDENTS</th>
</tr>
</thead>
<tbody>
<tr>
<td>GR</td>
<td>20</td>
</tr>
<tr>
<td>RE</td>
<td>15</td>
</tr>
<tr>
<td>TR</td>
<td>3</td>
</tr>
<tr>
<td>L</td>
<td>2</td>
</tr>
<tr>
<td>TOTAL</td>
<td>40</td>
</tr>
</tbody>
</table>

Advanced English I students use the Internet to practice grammar exercises and as it was observed in the previous questions only two students use the Internet to practice listening exercises.
Question 4: How much do you like using the web to learn English?

<table>
<thead>
<tr>
<th>CODING KEY</th>
<th>Description</th>
<th>Nº Students</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>a lot</td>
<td>20</td>
</tr>
<tr>
<td>ML</td>
<td>more or less</td>
<td>5</td>
</tr>
<tr>
<td>VM</td>
<td>very much</td>
<td>10</td>
</tr>
<tr>
<td>NM</td>
<td>not to much</td>
<td>5</td>
</tr>
</tbody>
</table>

Most of the Advanced English 1 students really enjoy spending time learning English through the websites.
**Question 5:** What do you think about using ESL/EFL websites for improving your listening skill?

<table>
<thead>
<tr>
<th>CODING KEY</th>
<th>Nº students</th>
</tr>
</thead>
<tbody>
<tr>
<td>H</td>
<td>They can help</td>
</tr>
</tbody>
</table>

In this table it is showed that all of the Advanced English I students who participated in this research consider that the Listening skill can be improve through the use of different websites.

**Question 6:** From the five websites you practiced this time, which was your favorite? Why?

<table>
<thead>
<tr>
<th>CODING KEY</th>
<th>Nº students</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td><a href="http://www.listen">www.listen</a> and write</td>
</tr>
<tr>
<td>B</td>
<td><a href="http://www.esl-lab.com">www.esl-lab.com</a></td>
</tr>
<tr>
<td>C</td>
<td><a href="http://www.elllo.org">www.elllo.org</a></td>
</tr>
</tbody>
</table>
Advanced English I students’ favorite website from the Top five used in the practice during the research was www.listen and write. Some of the students’ reasons about why they stated that they liked a specific website were mainly straight to the fact that, they actually could enjoy it and at the same time they could develop their listening skill. However, Advanced English students expressed that this is the most difficult website from the Top five websites but that was another reason why they liked it, because it represented a challenge for them.

In the other hand the websites www.eslf.com/robot/ and www.eslfast.com which belong to the Top five ESL/EFL websites were not mentioned at the time to answer the interview.
**Question 7:** Did you use the Top five websites to practice your listening skill by your own?

<table>
<thead>
<tr>
<th>CODING KEY</th>
<th>N° students</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>yes 30</td>
</tr>
<tr>
<td>B</td>
<td>No 10</td>
</tr>
</tbody>
</table>

Most of the students use the Top five websites to practice their listening skill by their own, which means additional to the time established to carry out the research. This particular finding is important because it not only helped to reinforce the fact that using the Top five ESL/EFL websites were important to develop Advanced English I students listening skill but also it gave reliability.
**Question 8:** Would you recommend using ESL/EFL websites to practice the listening skill?

<table>
<thead>
<tr>
<th>CODING KEY</th>
<th></th>
<th>N° students</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>Yes</td>
<td>40</td>
</tr>
</tbody>
</table>

All the Advanced English students would recommend using ESL/EFL websites to practice the listening skill because they consider important that the rest of the students know about them because in their point of view they can develop their listening skill.
5. Major findings

According to the results from both, the entry and exit listening tests and the interview, this research presented as major findings that:

1. At the beginning of the study, some of the Advanced English I students did not have the listening level required to be considered Advanced students.

2. ESL/EFL websites were important because they helped EFL students to develop their listening skill in order to reach the level required to be considered an Advanced English I student.

3. EFL Advanced students enjoyed practicing their listening skill by using ESL/EFL websites. This was demonstrated when students not only used the Top 5 ESL/EFL websites during the research but they also used the Top 5 ESL/EFL websites to practice on their own.

4. Advanced English I students expressed that ESL/EFL websites can help them to develop their listening skill. For that reason they could recommend to use them.
6. Conclusions

At the end of this research it was concluded that the problem of most of the Advanced English I students to develop their listening skill can be solved. However, it will take practice and a combined effort on the part of students and teachers as well, to inform students that they can make use of the different websites specifically to practice their listening skill.

In addition, it is demonstrated that the use of ESL/EFL websites promotes a positive attitude in the students as shown in the interview, because students enjoy practicing their listening skill, while surfing the Internet.

It is also important to mention that a large percentage of students usually use websites but they are not aware of the use of websites specifically to practice their listening skill, like for example: the Top five ESL/EFL websites studied, as it is shown in question number three of the interview on this research. The ESL/EFL websites are well-designed for the necessity to improve their listening ability, not only because they are easily accessible everywhere but also because through them, students can practice what they want, at any time. If the students are conscious about the importance that the use of ESL/EFL websites can make in the development of their listening skill, we will surely see an improvement in the listening proficiency and better outcomes in the listening assessments.
7. Recommendations for further investigation

The purpose of this research was to report the importance of the use of EFL/ESL websites in the development of the listening skill in the students of the Advanced English I level, which has been illustrated in this research paper. In this way recommendations are divided into: recommendations to the students and teachers, and recommendations for future research.

On the one hand, it is suggested that the students take into consideration: first, the importance of the listening skill which it is one the fundamental skills to learn a foreign language in order to become proficient in the English language. Remarkably, the importance of the use of ESL/EFL websites is highlighted due to the necessity of mastering English, as these websites can be the feature to change the students' listening performance, which not only helps listening itself but also helps the rest of the language skills as well. Second, students can take advantage of the Internet through the use of the ESL/EFL websites to practice their listening skill, because the more they practice, the more they can improve it. In addition, teachers can also contribute to lead students on which are the ESL/EFL websites they can use to practice their listening skill and how they can practice according to their preferences.
On the second hand, we present two recommendations for future research.

First, it is recommended that future researchers focus on English levels based on results of the entry test, because it was observed there were some students who do not have the level required for Advanced English I, so if there were a study that examined the use of the ESL/EFL websites in early levels, this could benefit students regarding their English performance. Second, it is recommended to use a larger sample of participants since the numbers of participants in this study was limited to the technological equipment available, to obtain stronger conclusions about the relationship examined between the use of EFL/ESL websites and the development of the students listening skill.

Finally, although the test and the interview in this study showed adequate reliability, some of the students asked for longer practice time than eight weeks for the expected effects. Future research may consider the development of more accurate measures for examining such ESL/EFL websites importance, through having students extend their practice to a longer time period.
